RESTANDO FRACCIONES - HOJA 2

Para convertir las dos fracciones en fracciones con los mismos denominadores, multiplica el numerador y el denominador de cada fracción por el denominador de la otra fracción.

1) $\frac{2}{3} - \frac{2}{5} = \frac{2\times5}{3\times5} - \frac{2\times3}{5\times3} = \frac{\quad}{15}$

2) $\frac{3}{4} - \frac{1}{3} = \frac{3\times3}{4\times3} - \frac{1\times4}{3\times4} = \frac{\quad}{12}$

3) $\frac{4}{5} - \frac{2}{3} = \frac{\quad}{15} - \frac{\quad}{15} = \frac{\quad}{15}$

4) $\frac{5}{6} - \frac{1}{4} = \frac{\quad}{24} - \frac{\quad}{24} = \frac{\quad}{24}$

5) $\frac{5}{6} - \frac{2}{5} = \frac{\quad}{30} - \frac{\quad}{30} = \frac{\quad}{30}$

6) $\frac{2}{3} - \frac{1}{4} = \frac{\quad}{12} - \frac{\quad}{12} = \frac{\quad}{12}$

7) $\frac{5}{7} - \frac{2}{5} = \frac{\quad}{35} - \frac{\quad}{35} = \frac{\quad}{35}$

8) $\frac{7}{8} - \frac{2}{3} = \frac{\quad}{24} - \frac{\quad}{24} = \frac{\quad}{24}$

9) $\frac{5}{9} - \frac{1}{4} = \frac{\quad}{36} - \frac{\quad}{36} = \frac{\quad}{36}$

10) $\frac{9}{10} - \frac{3}{4} = \frac{\quad}{40} - \frac{\quad}{40} = \frac{\quad}{40}$

11) $\frac{2}{3} - \frac{3}{8} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$

12) $\frac{8}{9} - \frac{3}{5} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$

13) $\frac{7}{10} - \frac{2}{7} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$

14) $\frac{3}{4} - \frac{5}{7} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$

15) $\frac{6}{7} - \frac{3}{8} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$

16) $\frac{7}{8} - \frac{5}{9} = \frac{\quad}{\quad} - \frac{\quad}{\quad} = \frac{\quad}{\quad}$
